REPORT OF THE COUNCIL — 1986-1987

To The Honourable the Minister for the Arts

Sir,

The Museum of Victoria Council presents herewith its Annual Report for the year ending 30 June, 1987, in accordance with Section 30 of the Museums Act 1983.

The Museum of Victoria is now four years old, following the merger in 1983 of the Science Museum of Victoria and the National Museum of Victoria. Through this merger the Museum of Victoria became the only museum in Australia, and one of few in the world, combining the varied aspects of museum endeavours in one institution, thus creating the potential in Victoria for stronger educational and public programs than elsewhere. To date that potential has only been partially realised but, as witnessed in this report, the future seems to hold more promise now than it has for many years. This promise has been awakened by the dedicated staff of the Museum who have cooperated to achieve the merger and who have been innovative in establishing new directions.

During the year the Council held 11 meetings. Office bearers were:

PRESIDENT — Professor J.W. Warren

DEPUTY PRESIDENT — Dr H.N.B. Wettenhall

TREASURER — Mr I. Sinclair

At the end of the 1985-86 year the Deputy President, Mr D.H. Kemp, retired from Council, being a long standing member and previous President of the Council of the Science Museum of Victoria. We wish to stress the importance of Mr Kemp's contribution to achieving a successful merger and setting goals for the new Museum structure.

Of particular significance to the Museum's future was the compiling of the Museum Development Study, a report of an independent committee established in 1985-86 under the chairmanship of Mr J. Arnold Hancock to undertake a major study of Museum needs and to formulate a brief for development. The Museum Development Study was submitted in November and recommends, inter alia, a strategy for the economic development of the Museum based on establishing some public activities at sites away from the city building complex, for example using the MMBW Spotswood Pumping Station for engineering technology exhibitions. Council adopted the proposals in the Museum Development Study and enthusiastically recommended them to the Government.

Some of the recommendations of the Museum Development Study impact on the responsibilities of the State Library/Museum Building Advisory Committee, in particular with plans for the existing city complex and the Queen Victoria Medical Centre site. Plans for the existing site include completion of the building in Russell Street to allow more public and office space, and the construction of an Omnimax Theatre at the location in La Trobe Street where the existing building has been left incomplete. These proposals, and one associated with the Queen Victoria site as contained in the accepted architectural scheme, could affect existing public thoroughfares and gallery space in undesirable ways if not properly planned. Further, there is need to guard against undue distortion of the original buildings, and the Historic Buildings Council has been asked to consider this aspect of the proposed development.

The management of the Museum has shown steady improvement as the Public Service restructuring gradually gets in place. For example, the Deputy Director of the new Division of Science and Technology was appointed in the course of the year. However, with regard to financial accounts the situation is still not completely satisfactory due to inadequate staffing and Council views this as serious, though there is no indication that resources have been either misplaced or misused.

The Building Management Committee, a Museum Council committee, which oversees the entire complex including that occupied by the State Library, again saw satisfactory progress of the works program in so far as available funds allowed. In earlier years under-expenditure of monies allocated for this purpose severely frustrated efforts at improvement. There still remains, however, significant issues of safety and security to be addressed. Also, the historical facade facing Swanston Street continues to deteriorate and dangerously shed pieces of rock, though a protective barricade is in place.

Significant acquisitions have been made to all categories of the collections and these are documented in this report. Of particular note is the Haines and Grut Motor Buggy of 1909 which represents the first attempt at the commercial construction of an 'automobile' in Victoria. This rare Motor Buggy was won at public auction through the generous support of the Helen Schutt Trust, the Victorian Automobile Chamber of Commerce, the Royal Automobile Club of Victoria, the Sunshine Foundation, several other contributors and special funds from the Ministry for the Arts. Also significant for the collections has been the addition of important Aboriginal artefacts, partially through donations and Museum purchases and partially through arrangement with the Victorian Aboriginal Cultural Heritage Trust.

Research and Scholarship continue to play an important role in the Museum's activities. A scheme of Student Scholarships has been established to encourage and assist young scholars in work on the collections or other research in the Museum's ambit. Also, the Thomas Ramsay Science and Humanities Scholarship is supporting the production of a book on the history of natural history in Victoria by Mr C. Finney. It is worthy of note, further, that research links with China, which have always been strong, continue with the Deputy Director of Natural History, Dr J. Bowler, acting as advisor to *Academica Sinica* on geological and geomorphological programs.

Like all museums, it is the public face of the Museum of Victoria by which most of the public, and to some extent the Government, judge its character and its contribution to Victoria. We are pleased that the rapidly increasing number of visitors, over 1,000,000 this year, and the greater attention the Museum is attracting indicates the value of the effort that has gone into public programs. The variety and magnitude of exhibitions is fully described herein. As examples, there have been two exhibitions dealing with the history of photographic processes, one with motion pictures, and one with still photographs arranged with the Australian Academy of Science; a joint exhibition with the Victorian Aboriginal Cultural Heritage Trust; a showing of Etruscan Art in connection with the Spoleto Festival, and a dozen more. Of special note was Esso's Return of the Dinosaurs open by the Premier, the Hon John Cain. This very popular exhibit included dinosaurs from China, Canada, and the USA, and featured a section on Victorian dinosaurs from Cape Otway. Next year the exhibition will travel to Sale and later to New Zealand.

A successful exhibition program requires considerable forward planning and constant liaison with other groups with similar interests. Two major exhibitions for the Bicentenary celebrations are being organised by the International Cultural Corporation of Australia for show here and then to tour. They are Shipwreck! and First Impressions, the latter being early accounts of the Australian flora and fauna being assembled by the British Museum (Natural History). The Museum is also assisting in

planning for a National Wool Museum at Geelong, an Antarctic Museum, the reconstruction of an 1888 street in Fitzroy, and other projects all jointly with other organisations.

Finally, no summary could omit reference to the Children's Museum component of the Museum of Victoria. This children's gallery has developed into an educational and inspirational centre more rapidly than its avid supporters could have hoped. 500,000 visitors have now come to this area of the Museum and favourable reactions to the children's programs continue to flow from many quarters. The Museum is currently reviewing this aspect of its activities with a view of possibly involving the Children's Museum in more wide reaching programs.

The favourable progress of the Museum over this year has been due to many people. We are particularly grateful to members of the Friends of the Museum for their support and to the Volunteer Guides whose work within, and collateral to exhibitions is so vital. Sponsorship from corporate groups and trust bodies has been gratifying and absolutely necessary, and we are very appreciative. We also extend our thanks to personnel of the Ministry and to you, as Minister for the Arts, for continuing encouragement and support.

J.W. Warren
PRESIDENT

DIRECTOR'S REPORT ON ACTIVITIES FOR 1986-1987

*To the President,
Council of the Museum of Victoria*

Sir,

I present herewith for consideration by the Council of the Museum of Victoria and subsequent transmission to the Honourable the Minister for the Arts, this report for the period 1 July 1986 to 30 June 1987.

• **NATURAL**
• **HISTORY**
• **DIVISION**

Introduction:

On July 21, 1986 Dr J.M. Bowler joined the Museum of Victoria as Deputy Director, Division of Natural History. Formerly in the Department of Biogeography and Geomorphology at the ANU, Dr Bowler brings with him a background in geology with a special interest in environmental evolution.

The arrival of the Deputy Director set the scene for the delayed restructuring of the Division. In that context, as the taxonomic needs of some groups diminish e.g. terrestrial vertebrates, the urgency for the Museum to pay more attention to habitat and changing environments increases. As a response to that need, the former Biological Survey group was reconstructed under the title of Environmental Records.

Vacancies in the scientific staff were filled, although one post, that of Dr Peter Jell, was lost in the reallocation. Dr Leslie Christidis was appointed as Curator of Ornithology; Dr Alan Yen was promoted to head Environmental Records leaving his former post vacant at SCI-2 level. Unfortunately shortage of funds prevent us from permanently filling that vacancy. Provision was provided for new technical staff to assist in collection management. Before these posts could be finalised, funding shortages have frozen two of the technical vacancies.

In its future priorities, the Division acknowledges the need to use collections in heightening community awareness of environmental issues. Towards this end two responses have been identified. Firstly a major exhibition on Victoria's salinity crisis is being organised in conjunction with the Salinity Bureau Community Educational Programme. After a display in Melbourne this exhibition is planned to tour Victoria, and some interstate regions over the next 18 months.

Secondly, an environmental study tour, 'Understanding your Environment', featuring information of the Mallee region is scheduled for November 1987. This involves a tour through northern Victoria, lectures in Mildura with field trips to special areas of the Murray River and the World Heritage sites of the Willandra Lakes. The Mildura lectures will provide an opportunity for district teachers to have access to Museum staff with specialist knowledge of the Murray region. Similar study tours will be scheduled for other regions of Victoria in succeeding years.

Thirdly, the place of humans in the changing Australian environment of the last 100 000 years is to be featured in a major exhibition in 1988.

Dr Tom Darragh was elected to Honorary Life Membership of the Malacological Society of Australia for services to the Society and Australian Malacology.

Dr Gary Poore continues to edit the Museum's journals, the *Memoirs of the Museum of Victoria* and *Occasional Papers from the Museum of Victoria*. In 1987 Volume 47 of the *Memoirs* (total of 223 pages) was published. The use of computers and word processors to markup text for typesetting is now well established. This procedure reduces the cost of journal production by approximately 35%.

Research

Research programs were again concentrated on investigating new and unusual species from Australian localities. In particular, a suite of rare arsenates, phosphates and sulphates from the oxidised zone at Broken Hill were investigated for the mining company MMM Pty. Ltd. This study has yielded approximately twenty mineral species previously unrecorded from Broken Hill, two or three of which may be new species. Results of this study are being prepared for publication.

Collaborative studies with Dr Alan Pring (South Australian Museum) and Dr Ernie Nickel (CSIRO, Western Australia) resulted in new mineral descriptions for a copper aluminium hydroxyl phosphate from Mt Oxide, Queensland and a cobalt calcium arsenate from Dome Rock, South Australia.

Dr Birch's membership of the New Mineral Commission of the International Mineralogical Association facilitated co-operation with mineralogists in Geneva, Switzerland and Amsterdam, the Netherlands and saw the successful completion of descriptions of new species *ecandrewsite* and *perroudite*.

Fundamental to mineralogical research has been the use of the electron microprobe at the University of Melbourne, where Dr Birch is Visiting Research Fellow. Dr Birch commenced as a co-supervisor of a MSc student from China, researching gold mineralisation near Woods Point.

A significant proportion of the research time was devoted to identification, usually by microprobe analysis, of rare species sent by mineral collectors from Queensland, South Australia and Victoria. This has considerably enhanced the Museum's reference collections, and provided the impetus for a number of publications.

Under the guidance of Technical Officer Dermot Henry, the department's volunteer staff, Joan Lamond, Lyn Haupt, Margaret Day and Jack Leach continued the computerisation of the data on the mineral collection; almost half of the collection has now been recorded in the mineral database.

A database to record data on new mineral species not yet published and for voting approval by Dr Birch for the Commission of New Minerals and Mineral Names of the International Mineralogical Association has been initiated.

Jenny Holamby, a new volunteer, has begun to computerise the data for the Department's slide and transparency collection. Dr Ralph Segnit, an Honorary Associate of the Museum, undertook voluntary assistance during the year.

Initiatives were undertaken to discuss transfer of the geological collections of the Geological Survey of Victoria and the Melbourne University Geology Department. These valuable historical collections require urgent curation but their acquisition by the Museum will impose significant strains on space and staffing.

Acquisitions

Acquisitions for the year consisted of 379 mineral, 374 rock and 24 meteorite specimens, totalling 777 registrations.

Purchases were orientated towards enhancing the gemstone and rare species collections and seventy rare minerals not previously represented in the collection were purchased from Australian and foreign mineral dealers. Other significant purchases included seven faceted Australian gemstones and 16 gemstones from overseas localities from Mr J. Slater's collection, and some superb native silver specimens from Elura Mine, Cobar NSW, possibly among the best Australian silvers ever collected.

Dr Ernie Nickel, Division of Mineral Chemistry CSIRO, Western Australia lodged with the department four Australian mineral type specimens. MMM Ltd. (Broken Hill) sent approximately 90 mineral specimens from the oxidised zone in the Kintore Opencut Broken Hill for identification and donation. This material included many rare arsenates not previously recorded from Broken Hill and several new species currently under investigation.

Mineral and meteorite exchanges were carried out with Mr F. Cureton, Tucson, Arizona, USA – 2 meteorites and 14 rare minerals were obtained. Prof. Zhu Jinchu, Nanjing University, China exchanged five mineral specimens with the Department. Twenty meteorites from various foreign localities were obtained by exchange from Mr D. New, Anacortes, Washington, USA and 1 meteorite was received from Mr W. Zeitschel from West German.

Dr Birch and Dermot Henry collected specimens from many of the abandoned lead-zinc-silver mines and copper mines in the East Gippsland area. Material from the Kintore open-cut Broken Hill, NSW and Dome Rock, South Australia was collected on separate occasions.

Dr Birch collected material from gemstone localities in San Diego County and the New Idria region in California, USA, whilst attending the International Mineralogical Association conference at Stanford in July 1986.

During an excursion following the Kimberlite Conference in Perth in August 1986, Dr Birch collected a representative suite of the diamond-bearing lamproites from the Kimberley region, Western Australia. Dermot Henry collected a representative suite of rocks from the Cambrian Mt Stavelly complex near Stawell, Victoria.

Department of Invertebrate Palaeontology

Research

A study by Dr Tom Darragh of recently trawled specimens of the deep water family Columbariidae from the east coast of Australia resulted in the recognition of a new species of *Columbarium* from Queensland and the first record of the genus *Coluzea* from the east coast of Australia. In addition a new species of *Coluzea* was described from deep water off New Caledonia and range extensions for other species of *Columbarium* were recorded.

At the request of the Editor of the *Australian Dictionary of Biography*, biographical articles on George Baxter Pritchard and Ernest Willington Skeats were submitted by Dr Darragh.

An enlarged and revised version of a paper 'The Geological Survey of Victoria under Alfred Selwyn', originally presented by Dr Darragh at a seminar at History and Philosophy of Science Department of Melbourne University in 1983 was finalised for publication and submitted.

Dr Holloway completed a revision of the trilobite order Lichidae, in conjunction with Dr A.T. Thomas of Aston University, Birmingham, U.K. This revision, which involves a reassessment of the 45 genera and subgenera recognised within the Lichida, will serve as the basis for the treatment of the group in the *Treatise on Invertebrate Palaeontology*, the standard reference work in the English language.

Curation

The main thrust of curatorial work during the year has been directed towards improvements in the organisation of the collections, to facilitate the easy location and recovery of specimens. Reorganisation has been carried out particularly within the collections of Australian coelenterates,

foreign cephalopods, and foreign Cainozoic gastropods. Reorganisation was completed in the interstate Middle Palaeozoic stratigraphic collections, and was commenced in the Victorian Middle Palaeozoic collections. Approximately 5500 specimens were catalogued, almost half of these being Cainozoic foraminifera recently donated by Mr A.C. Collins of Geelong.

Acquisitions

During his long service leave in August and September 1986, Dr Darragh collected Late Cretaceous molluscs from the Miria Formation on Giralia Station, Western Australia as part of a project to revise the fauna. A large suite of Late Pliocene molluscs was also collected from a series of test pits sunk into the Roe Calcarene on the Roe Plain near Madura, Western Australia.

Collections were made by Dr Darragh from the Brown Creek Formation in Victoria to supplement material already in the collection.

Several field trips to central and southern New South Wales by Dr Holloway and Ms Clark resulted in large additions to the department's collections of Silurian invertebrates. Excellent collections of well-preserved trilobites were obtained from limestones in the Orange district, as part of an ongoing research project by Dr Holloway on Silurian and Devonian trilobite faunas of south eastern Australia. Extensive collections of trilobites and other faunas were also made in the Yass district, while a trip to the Bombala district yielded good collections of Silurian brachiopods and corals.

Very large collections of Carboniferous and Permian invertebrate fossils were donated by Dr G.A. Thomas under the Taxation Incentives for the Arts scheme. The collections include about 60 000 specimens from the Moogaree Limestone and Callythara Formation, Carnarvon Basin, Western Australia, and about

2000 specimens of silicified Permian invertebrates from the Glass Mountains of West Texas. The latter collection is probably the most comprehensive one from this famous locality outside the United States.

Department of Invertebrate Zoology

Research

In July 1986, the curator participated in a research cruise on board ORV *Franklin*. The main purpose of the cruise was to study the benthic, demersal and mesopelagic communities of south-eastern Australian continental slopes. The project is a Museum/Victorian Institute of Marine Sciences joint research project. Forty-nine sampling stations between 200 m and 2000 m were occupied using epibenthic sled, midwater trawl and demersal trawl to collect biological samples. The sorting of the benthic samples is being done by Dr J. Just, a scientist employed by VIMS through a MS & T grant awarded to the Museum and the VIMS jointly. The Museum participants in this project are the Curators of Crustacea, Fishes and Invertebrate Zoology.

Preliminary analyses of the samples have uncovered many taxa not recorded from the region previously. One specimen of the squid *Cycloteuthis serventyi* was captured, representing the first record of this species in the Pacific Ocean.

During the year, measurement and identification of the adult cephalopod specimens from the CSIRO Southern Program was completed. Approximately 2500 specimens belonging to 50 species were represented. The data of this program is the most comprehensive data set of the Australian cephalopod. Analyses of the data are continuing. The larval specimens of this program has yet to be examined.

In August 1986, Dr T. Okutani, Professor of Invertebrate Zoology of Tokyo University of Fisheries spent three weeks in the Department work-

ing with the Curator on some Australian sepioid cephalopod. A paper describing four new species found is in preparation. Prof. Okutani also donated a representative series of Japanese sepioid to the Museum.

From January to April 1987, Dr Clyde Roper, Curator of Molluscs of the Smithsonian Institution visited the Department working with the Curator and completed a paper describing the morphology and hypothesising the functions of the dermal tubercles of cephalopods. The result of this work will have bearing on some aspects of invertebrate histology and squid taxonomy.

The visits of these two senior scientists to the department have benefited the Departmental personnel and postgraduate students supervised by the Curator.

In October 1986 the Curator visited the East China Sea Fisheries Research Institute in Shanghai as a guest of the Chinese Ministry of Agriculture, Animal Husbandry and Fishery for the purpose of developing collaboration research programs with the scientists of that institution. During the four weeks visit, the Curator undertook the following activities: 1. Conducting an introductory course on cephalopod biology and fisheries. 2. Participating in the writing of a book on cephalopod biology and fisheries in the Chinese language. 3. Studying the cephalopod collection of the Institute. 4. Exploring possibilities of future collaboration with scientists of that institute. Discussions were also held with senior staff of the Shanghai Museum of Natural History regarding possible areas of collaboration.

The monographic revision of the Australian Sepiidae is progressing well. A large series of type specimens of cuttlebones has been borrowed from the Australian Museum. Careful studies of this material are necessary in order to solve the complex nomenclatural problems involved.

Data sheets of the cephalopod component of the Zoological Catalogue

of Australia (Australian Biological Resource Study funded) were completed and submitted to the Bureau.

Another ABRS funded project, the revision of Ischnochitonidae of southern Australia (grantee Tonia Cochran) was also completed. The final report to the Bureau has been submitted and a publication is in preparation.

The Assistant Curator continued the compilation of a checklist of Southern Australian marine bivalves. A visit to the Australian Museum, Sydney, enabled collation of additional data on type specimens and geographic distributions of many of the species. Approximately half of the 60 families (including over 1000 nominal species) are now in final draft.

Curation

Lack of space continues to be a major obstacle to the Department's curation programs.

Major programs undertaken during the year were:

- (i) Processing of the recently collected Antarctic material, including specimens from Heard Is., Macquarie Is. and Prydz Bay. Much of the material is now sorted and will be identified by relevant experts.
 - (ii) Documentation of microscope slide collections of Porifera and Hydroids, including type specimens.
 - (iii) Establishment of a reference collection of south-east Australian non-marine molluscs.
 - (iv) Commencement of the upgrading of the curation of the Opisthobranch (mollusc) collection.
- Volunteer assistance made major contributions to each of the above.

Acquisitions

33 major accessions comprising in excess of 20 000 specimens of invertebrates were processed. The major accessions are:

24 drums of invertebrates from Prydz Bay, Antarctic and the Macquarie Island area.

A large collection of benthic material collected by the Museum team on the Franklin.

30 lots of cephalopod and chitons from Japan.

A large collection of cephalopod beaks — a reference collection used in connection with the International Beak Workshop in Plymouth, UK in 1981.

A large collection of echinoderms from southern Australia.

Department of Crustacea

Research

Dr Poore's research effort has been divided between two major projects, the taxonomy of anthuridean isopods and the taxonomy of valviferan isopods. Although support from the Australian Biological Resources Study for the anthuridean research has ceased, the papers associated with this work are still being written and published. In early 1987 Dr Poore and Ms Lew Ton spent two weeks in Adelaide and another two weeks in Sydney working on the Museum collection of valviferans. Many of the preliminary drawings for a planned paper on the family Idoteidae were completed.

The Australian Biological Resources Study provided additional funding for the completion of a contribution to the Zoological Catalogue of Australia and much of Ms Lew Ton's time has been spent compiling and editing data.

Dr Jean Just is working in the Department of Crustacea, on a grant which is held jointly by staff at the Museum of Victoria and the Victorian Institute of Marine Science. He is processing and identifying material which was collected from the continental slope (500–2000 metres). This project is one of the first to sample waters of these depths in Australia

and many new and unusual species have been collected.

Mr Laurie Cookson, a Ph.D. student supervised by Dr Poore continues his work wood-boring marine isopods.

Curation

Much of the curation done in 1986–7 was performed by students from the Royal Melbourne Institute of Technology who worked in the Department as part of their study requirements. The employment of Robin Wilson as Technical Officer will enable much more time and effort to be devoted to identification and organisation of the collection.

Space for collection storage is at a premium and the collection needs more space if it is to be housed in a way which allows easy access.

Acquisitions

Crustacea from the material processed by Dr Just are being incorporated into the collection. The most significant find has been a species of *Hirsutia*. This genus was previously known only from the South Atlantic Ocean and is one of only two genera of the Order Mictacea (first described in 1985). As far as is known the Museum of Victoria has the only extant specimen of *Hirsutia* as the original was inadvertently destroyed.

Dr A. Sokol, who studied yabbies (*Cherax* spp.) for his Ph.D. lodged his collection (100 lots) in 1986.

Department of Ornithology

Research

Further data was collected on specimens of Pelecaniformes for the *Handbook of Australian, New Zealand and Antarctic Birds*. This included a visit by Rory O'Brien to the South Australian Museum where he examined the collections of Pelecaniformes. Information on plumages and measurements of other bird species has

also been recorded. The Handbook is a co-operative project co-ordinated by the Royal Australian Ornithologists Union and involves professional and amateur ornithologists. Volume one of the Handbook is planned for publication in 1990.

Honorary Associates Dr Robert Baird and Dr Pat Rich continued their research work on fossil birds of the Quaternary and Tertiary periods. Robert Baird submitted his thesis on the avian portions of the quaternary cave deposits of Southern Australia and their biogeographical and palaeoenvironmental interpretation. He has now been awarded a Ph.D. by the Department of Earth Sciences, Monash University.

Curation

Field collection by staff and exchange with Australian and overseas museums have added significant specimens to the research collections.

The collection of over 600 spirit specimens was re-housed and re-organised to facilitate access for users.

Robin Nettleton and Fiona MacLaine assisted staff with re-housing half of the 770 mounted bird specimens which were formerly on display in Kershaw Hall. Further cabinets are required to complete this re-housing. Many of these specimens will be on display in September in the *Birds and Gardens* exhibition.

Robin Nettleton and Barbara French sorted through the Department's archival collection. They have now placed archival material in archival envelopes and labelled material to allow for easy access and to prevent deterioration of this valuable resource.

RMIT students on internship in the department entered 220 records of Australian mounted specimens on the computer data base. They also assisted with labelling of J. R. Henry bird-skins in the research collection.

Acquisitions

- a) Total of 300 bird specimens
- b) Significant Acquisitions
97 skins and skeletons of birds received on exchange from the following institutions:—

South Australian Museum; Royal Ontario Museum, Canada; Institute of Systematic and Experimental Zoology, Poland; Brigham Young University, Utah, USA; University of South Florida, USA; University of Michigan, USA; University of Kansas, USA.

Department of Vertebrate Palaeontology

Research

The investigation of the ancestry of modern Australian mammals and the study of Australian dinosaur faunas continued to be the focus of this Department's research program.

The curator, Dr Tom Rich, together with Prof. em. Dr Walter Kuhne of the Free University of Berlin, spent two weeks during April inspecting the brown coal deposits in the LaTrobe Valley and at Anglesea. Dr Kuhne concluded that the deposits were too regular and lacked similarities that marked the sites of occurrence of fossil bones in the brown coals of Germany.

The study of Australian dinosaurs was again based on excavations at Dinosaur Cove, on the Otway coastline of Victoria, made possible by the continued support of Atlas Copco, Earthwatch, Mobil Oil, National Geographic Society, Friends of the Museum of Victoria, Council of the Museum of Victoria together with the added support of David Holdings and ICI.

Explosives were used to blast two tunnels into the cliff face to enable mining of the fossiliferous layer. Several tonnes of rock were removed for study. The most significant find was a skull and 25% of the associated skeleton of a juvenile dinosaur weighing approximately 1 kilogram body

weight when alive. It is notable in that it is the most immature and smallest dinosaur for which a brain is known.

Work continued on the investigation of collagen content in fossil vertebrate bone, and the Bullock Creek, NT Miocene material acid preparation.

Curation

The major thrust of the curatorial programs for the department of Vertebrate Paleontology involved entry of data about registered specimens into computer files. Work experience students from RMIT assisted with data input. A data bank of all known Victorian fossil vertebrate localities and references continued to be compiled. Volunteers carried out the preparation of fossil specimens from Dinosaur Cove. A major effort of curating the collections on a continuing basis of 3 months each year is being undertaken by visiting Honorary Associate and retired curator of palaeontology, Dr Reid Macdonald from the Los Angeles County Museum and Mary-Lee Macdonald. 500 specimens were registered for the twelve month period.

Acquisitions

A major collection of bird material from Lord Howe and Norfolk Island has been received from Monash University. Casts of new material of dinosaurs from Australia and Canada and reconstructions of dinosaurs have been acquired. The continued preparation of Bullock Creek material has uncovered two new fossil vertebrate skulls. The extensive field excavations at Dinosaur Cove have yielded approximately 1000 fossil vertebrate and plant specimens.

Department of Ichthyology

Research

Documentation of southern Australian species continues to take highest priority in the departmental research strategy. Acquisition of a substantial number of previously unrepresented species from slope and deep midwater zones resulted from participation in a multidisciplinary study of slope communities along the coasts of southern New South Wales, eastern Victoria and eastern Tasmania. This study being carried out in conjunction with the Invertebrate Zoology and Crustacean Sections, as well as the Victorian Institute of Marine Science and Technology Grant Scheme in the amount of \$20,000 and supported by the Victorian Institute of Marine Science for \$2,700. Work was carried out aboard the recently launched CSIRO oceanographic vessel RV *Franklin*, one of the few Australian research vessels capable of doing such 'blue water' work. Previously undescribed species which have come to light as a result of studies of this type, are the subjects of a series of publications to fill a soon-to-be-published issue of the Museum's *Memoirs*. This series of papers has been solicited to provide the scientific community with properly documented names for many species of fishes that have featured in recent publications and that will be treated in forthcoming identification guides.

Curation

Material accumulated from extensive field programmes early in 1986 was processed and documented through the efforts of Ms Rosalind Poole, a half-time temporary technical assistant, and Mr Mark Norman, recently appointed Technical Officer for the section. A concerted effort was made to enter specimen documentation into the fully implemented computer registration system and to take advantage of the system's loan

management and automatic label generation facilities. Ms Sema Budak, a Royal Melbourne Institute of Technology student participating in that institution's in-service applied biology job experience scheme, contributed significantly to the curation of the collection.

Acquisitions

More than 2000 specimens from deep midwater and slope depths off south eastern Australia were accessed as a result of sampling carried out aboard the RV *Franklin*. Approximately 50 additional specimens comprising 8 accessions from a diversity of locations, including Victoria, Tasmania, Queensland, north-western Australia, Macquarie Island and Indonesia, were also received.

Department of Entomology

Research

The curator Dr Arturs Neboiss completed the Trichoptera chapter for the second edition of the textbook *Insects of Australia*, a publication by CSIRO planned for the Australian bicentenary year.

Trichoptera material received from the Wallace Expedition to Sulawesi, loans of New Guinea and accumulated North Queensland specimens were studied and resulted in a comparative analysis. This paper was presented by the Curator at the 5th International Symposium on Trichoptera held at Lyon, France in July 1986. At the same time collections from the research area were studied in several Dutch, German and Swedish museums. For this work the Curator used his annual leave and paid all travel and other expenses.

The monitoring of water quality changes in Townsville water supply by the Freshwater research group of James Cook University was assisted by detailed study of Trichoptera of the area.

A joint research project between Entomology staff of the Museum (Neboiss, Walker & McPhee) and the Zoology Department, LaTrobe University under the leadership of Dr T. New investigated the biology of the endangered damselfly *Hemiphysbia mirabilis* at Wilsons Promontory National Park. In the same area a lively population of an endemic and endangered Australian caddis-fly species *Plectrotarsus gravenhorsti* was present. After 32 years of search Dr Neboiss finally resolved the life history of this phylogenetically and taxonomically interesting insect.

Following the publication by the Assistant Curator of the Revision of the Australian species of the genus *Homalictus* (Mem. Mus. Vict. 47(2): 105-200) numerous requests were made for assistance with the identification of native Australian bees being studied in various Australian and overseas projects. Most time has been spent working with Dr Evan Snudgen, Australian Museum, Sydney, on a project attempting to quantify the effects of the introduced honey bee, *Apis mellifera*, on the native Australian bee fauna.

Work on a revision of the subgenera of *Lasioglossum* (Hymenoptera: Halictidae) has begun and all Australian collections have been moved to Melbourne. Part of this work will constitute a Ph.D. thesis for which K. Walker is enrolled at Latrobe University.

Curation

Type registration continued throughout the year and all newly described material was entered onto computer.

Considerable help was continuously received from volunteers, particularly Mr & Mrs G. Burns, who worked on the Jewel Beetle collection (Buprestidae: Coleoptera) and Mr P. Kelly on leaf-eating beetles (Chrysomelidae: Coleoptera).

Acquisitions

Following the death of Mr F. Hallgarten, his collection of Australian beetles was donated to the Museum. It consisted of some 2000 specimens. Several hundred specimens of beetles were donated by Mr G. Burns and Mr P. Kelly.

Department of Environmental Records

Research

The research of the Department continued in both freshwater and terrestrial projects, although there was no vote funded freshwater research owing to a vacancy on the staff. Freshwater projects were carried out with grant funds.

Terrestrial research concentrated on the Victorian Mallee, with completion of field work at Milmed Rock in the Big Desert. Information gathered in the vote funded mallee surveys is being supplemented by a grant from the Land Conservation Council to survey the invertebrates from 120 sites over the northern Mallee. This project was a collaborative venture between botanists from the Flora Survey Group and zoologists from the Arthur Rylah Institute and Environmental Records staff and involved surveying the plants, vertebrates and invertebrates. Field work has been completed.

Another terrestrial project began this year with a grant of \$20,000 from the World Wildlife Australia fund to study the biology, ecology and conservation of the Giant Gippsland Earthworm.

With the drafting of the Flora and Fauna Guarantee Act to include invertebrates, Dr Alan Yen has spent time assisting the steering committee with the Act in relation to the conservation of invertebrates.

There were three freshwater grant projects in the Department this year. The first two-year Australian Biological Resources Study funded water

mite project was completed in March, and a second two-year water mite project has also been funded by the Australian Biological Resources Study. The second project involves the production of a key to the genera of Australian water mites. The Thomson River Post Construction Monitoring project continued field work. The Australian Water Research Advisory Council funded joint Museum-Monash project began in earnest this year with study sites being established on the Acheron River to observe the effects of physical disturbance on the benthic fauna.

Department of Mammalogy

Research

The chapter by the Curator on the Thylacinidae or Tasmanian Tiger for Volume I of the *Fauna of Australia* has been edited, proofed and is now in press with the Bureau of Flora and Fauna, Canberra. A paper on mammal research collections presented by the Curator at the First International Conference for Mammal Collections, Edmonton 1985, is being incorporated in a book on Mammal Collection management to be published by Texas Tech. University. Galley proofs for the work have been checked.

Another area of Donald Thomson's mammal work, dealing with his Victorian notes and collections has been revised for publication by the Curator and Technical Officer. This work is significant in both historical and zoological context.

The Curator has completed a paper on dietary components of several of Australia's endangered mammals, based on material held in the collections.

Research conclusions on Gould's Wattled Bat, *Chalinolobus gouldii*, are being refined for publication.

Curation

Computerisation of the mammal records has made headway, and about 8000 records (approximately a third of total holdings) have been completed to date. To attain this goal, use has been made of outside assistance from volunteers and from students of the Royal Melbourne Institute of Technology who are participating in an internship program in this section throughout 1987. A program is being developed to incorporate information about storage location and current use of mounted display material.

The lack of adequate storage space for the collections continues to hamper curation. Maintenance of spirit collections is being carried out with assistance from RMIT intern students. A co-ordination program for acquisition and collection of mammal material within Victoria has been instigated by the Curator with the Ministry for Conservation, Forests and Lands.

Acquisitions

- a) Approximately 200 specimens were acquired during the year.
- b) Of special significance were:
 1. A specimen of *Macropus giganteus*, Eastern Grey Kangaroo, which extends the range of this species in north-western Victoria
 2. Rare and endangered species: *Petaurus norfolcensis*, Squirrel glider
Gymnoblideus leadbeateri, Leadbeater's Possum
 3. *Dasyurus maculatus*, Tiger cat from Mt Talbot, Victoria — an unusual location for the species
 4. *Selenarctos thibetanus*, Arctic Black Bear — skin. (Confiscated item from the Australian National Parks and Wildlife Service)
 5. Skeletons of *Burramys parvus* the Mountain Pygmy Possum from Mt Hotham, Victoria

Department of Herpetology

Research

The major research thrust of the Department has been the continuation of the Herpetofaunal survey of the Victorian Mallee. The field work for the Big Desert section of this work was completed during the year, and analysis of data and writing up are well advanced. Sites have been selected and established in an area of the Sunset Country which has been poorly studied, ready for field sampling to be undertaken this year.

Curatorial

Work has continued on establishing the Department's data base, and some 15 000 specimens have now been entered. This program is currently being delayed by lack of finance to convert the data from its current raw (computer) format, to that required for the data-base. A grant application has been made to the Australian Biological Resources Study to provide personnel, plus some assistance in both the hardware and software needed to continue this project.

The Department is involved with the program in which the Royal Melbourne Institute of Technology Applied Biology students work in the Museum as part of an elective. During the first half of the year Ms Tania Gatehouse worked within the Department, and during the latter half of the year Ms Dianne Miller has been in the Department. Each of these students spent approximately one half day per week, and assisted in maintaining some of the routine curatorial duties such as 'topping up' as well as working on more advanced projects. This help was invaluable as no paid assistance is available, although badly needed.

Acquisitions

Most acquisitions during the year resulted from either Departmental collecting, or from the activities of the

vertebrate fauna survey team of the Department of Conservation, Forests and Lands. A total of some 120 specimens were registered into the collections.

Grants to Natural History Department

Department of Invertebrate Zoology

Benthic, demersal and mesopelagic communities of south-eastern Australian continental slopes — Marine Sciences and Technologies Grants Scheme — \$20,000 (Joint grantees Poore, Hammond, Lu, Gomon).

Systematics of Australian phyllodocidae — ABRS — \$33,337 (R. Wilson).

Department of Crustacea

Australian Biological Resources Study

1. Taxonomy of Australian Valvifera (Crustacea, Isopoda) \$27,200
2. Zoological Catalogue of Australia \$5,500 (first 6 months of 1987).

These grants have enabled the employment of Ms Helen Lew Ton as full-time research assistant and Mr Neil Denning as part-time technician.

Marine Sciences and Technologies

1. Benthic demersal and mesopelagic communities of south-eastern Australian continental slopes. \$20,000 (held jointly with Martin Gomon and C.C. Lu (Museum of Victoria) and L.S. Hammond (Victorian Institute of Marine Science)).

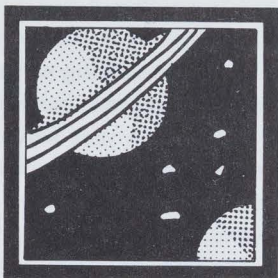

This grant partially funds the full-time employment of Dr Jean Just as Research Fellow (grant administered by V.I.M.S.).

Department of Ichthyology

Benthic, Demersal and Mesopelagic Communities of South-Eastern Australian Continental Slopes, with Gary Poore, C.C. Lu, and L.S. Hammond. Australian Marine Sciences and Technologies Grant — \$20,000.

Department of Environmental Records

Australian Biological Resources Study	\$28889.00
Thomson River Project	37241.00
Land Conservation Council Mallee Project	6445.00
World Wildlife Giant Gippsland Earthworm Project	4250.00
Total	\$76825.00
Thomson River Post Construction Monitoring — Rural Water Commission, MMBW, & Mornington and District Water Board.	

Introduction

Regrettably, however, the Division's collections have been further degraded during 1986-87 through lack of conservation work and through avoidable damage occasioned by totally inadequate storage. This lack of storage space has further reduced the Division's capacity to develop new collections of contemporary relevance and to accept rare opportunities of gifts for existing collections.

The major work carried out by the Arms section under Curator Mr Ray Fielding during the year has been the assessing and documentation of the collection of military memorabilia received from the Victorian Branch of the RSL. A considerable number of items have been recorded on computer and adequate storage provided.

Major acquisitions for the collection have been the donation of a collection

Department of Astronomy

A total of 83 503 visitors attended the Planetarium throughout the year, of these 48 806 were in groups from schools.

The Planetarium staff, under Dr Robin Hirst, this year produced four new shows, *The Universe Recorded*, *The Star of Bethlehem*, *Dinosaurs and the Death Star*, and *Where are We?* All shows have been well received with seat occupancy averaging an excellent 75 per cent plus.

Although total attendance figures did not reach those of 1985-86 when additional sessions were held to cater for the interest in Halley's Comet, this year's figure is an encouraging seventeen per cent increase on the 1984-85 attendance. This indicates a continued real growth. The active publishing program continued with the production of educational material to accompany the Planetarium shows.

With the assistance of members of the Astronomical Society of Victoria, 65 demonstrations were held at the Old Melbourne Observatory.

The astronomy collection was enhanced with the presentation by the Astronomical Society of Victoria of 35 original cartoons featuring Halley's Comet. These include the work of the nation's best cartoonists.

Curator, Mr Geoffrey Holden has made major acquisitions in the scientific instrument, dental, radio, video and microscopy fields. In the last-named area, a magnificent George Adams 'Universal' microscope of about 1760 has been donated.

Another acquisition which merits specific mention is the Alfred Coates collection of 1920s radio parts. This collection is exceptional as it represents the entire stock of a suburban radio shop (which never opened due to the Depression). British and American parts were recovered in mint condition after the owner's death and offered to the Museum by his family.

Touch-screen/software developed for the *Museum on a Platter* exhibition was developed by this Section. This program tied together a touch-screen, videodisc player and personal computer, and the exhibition seeks to reflect the combining of technologies to provide a formidable array of information handling facilities.

Department of Engineering and Transport

The Engineering and Transport Section (Curator, Mr Bill Sidebottom) has contributed to many facets of the Museum's activities during the year. Great credit must be given to the several volunteers who have worked on a regular part-time basis. A major undertaking has been the forthcoming exhibition *Motoring Memories*. However there continues to be a considerable backlog of research, unanswered enquiries and collection-related tasks.

All material stored at Port Melbourne store has now been relocated into improved storage at Brooklyn and the serious rate of degradation applying in the past has been temporarily arrested. However, conservation and protection of ship models continues to be a matter of concern.

The Melbourne and Metropolitan Board of Works continues to support the Museum of Victoria in providing storage facilities for part of the engineering collection at its Spotswood Pumping Station.

Significant acquisitions included:

- 1913 F.N. Motorcycle (\$6,000);
- c. 1909 Haines and Grut Motor Buggy (\$100,000);
- a unique collection of model locomotives (\$25,000).

Department of Numismatics

Expansion of the resourcing structure for collection development has been the primary focus in a year when purchases were at their lowest since 1976 (when the collection was brought to the Museum).

Curator, Mr John Sharples, has advanced plans for a \$1 million Numismatic Fund; a cultural tourism package for the US, 'Numismatics 1988'; and commercial publication of a catalogue of Australian coins and tokens.

Major acquisitions included the bequest of the Encyclopedia Britannica Gold Medal presented to Dame Kate Isabel Campbell for Medicine; and, purchase of a pattern 1951 Australian florin.

Displays of material included: *Victoria Regina* (on Queen Victoria's reign); Badges of the Victorian Racing Club Phar Lap exhibition sponsored by SIO; and Western Australian shipwreck coins (to launch fundraising for the Bicentenary exhibition, *Shipwreck*).

Department of Photography and Cinematography

The Photographic Archive Project capitalised on its outreach work throughout 1985-86 with the publication of the Museum's first book of rural Victorian photographs, including historical commentary with contemporary oral histories. The book *Private Lives — Public Heritage: Family Snapshots as History*, was published in conjunction with Century Hutchinsons Australia. It was written by Curator Mr Euan McGillivray in collaboration with Professor Weston Bate and Mr Matthew Nickson.

The Archive continued to gain recognition as a significant collection. Hundreds of photographs have been used by historians, researchers and students, in books, journals and exhibitions. The computer catalogue continues to be updated and is the only interactive, photographic data base of its kind in Australia. The

Australian Bicentennial Authority granted the Archive \$30,000 to continue into 1988.

Notable acquisitions this year included:

Motion picture equipment used by Mr Bert Abbott to sell theatre advertising pre 1915; 2500 glass negatives from a suburban Melbourne Photographic studio; amateur motion picture films and equipment used by an enthusiast during 1949-50.

The Curator managed two major exhibitions: *Images — Illusion and Reality*, a history of photography from the Société Française de Photographie presented in conjunction with the Australian Academy of Science; and *Phantarama — The Origins of Moving Pictures*, presented in conjunction with the Australian Film Institute.

Divisional Registrar

Ms Ruth Leveson was appointed Divisional Registrar with responsibilities expanded from collection records management to encompass a wider range of activities, namely, storage and object movements. Some inventory work was also commenced.

With the Curator, Rural Science, the Registrar conducted tests of the TITAN computer package as a system for on-line processing of the Division's collection records. Suitable 'screens' were designed and the magnetic format of the existing database translated as required. The tests provided clear indication that the system was a suitable one and could be immediately implemented if suitable computing equipment was available to the Division.

A major achievement this year was the production of Edition 8 of the microfiche catalogue.

Research Scientist

The main project of Research Scientist Dr Hayden Downing has been the production of a catalogue of scientific instrument makers who were working in London between 1840 and 1900.

This is a period not covered by the standard texts such as Joyce Brown's *Mathematical Instrument-Makers in the Grocers' Company 1688-1800*, and Professor E.R.G. Taylor's book *The Mathematical Practitioners of Hanoverian England 1714-1840*.

The first draft of the catalogue was distributed to selected museums in England and Australia for consideration and comment. Additional research work incorporating suggestions is now complete.

It is hoped that the catalogues will not only be marketed in printed form but also as microfiche, and as a database on computer disk.

In October 1986, Dr Downing resigned from the Council of the Museum Association of Australia Inc. having completed the maximum period of five years, the last two as President.

Department of Rural Science

Curator of Rural Science, Mr Martin Hallett, acted as Deputy Director of the Division for some seven months of 1986-87. This naturally deflected some attention away from rural science issues. Nonetheless progress was made.

Restoration work on the Sunshine 'A' tractor was completed during the year. The machine was subsequently displayed at rallies and at the Museum as part of International Museums Day. Detailed specification for the restoration of the Cowley steam traction engine was also commenced.

The Curator was involved in the development of places for the Geelong Wool Museum and the conservation of Day's Mill at Murchison. He was also instrumental in producing the *Museum on a Platter* exhibition.

Through the efforts of Assistant Curator (temporary), Mr Gary Vines, a great deal of accessioning and documenting has been completed in both the artefact collection and the H.V. McKay Archives.

With the assistance of volunteer, Mr L. Sprunt, collecting, cataloguing and indexing of agricultural trade literature has continued throughout the year. This expanding collection has become a very valuable resource for the understanding of our technological heritage in the rural sector.

• **HUMAN**
• **STUDIES**
• **DIVISION**

Introduction

This year proved to be a period of reorganisation, recruitment and consolidation by the Human Studies Division. The implementation of effective collections management systems remains the key to greater public use of Divisional collections and considerable resources are being directed to this end. Inadequate storage and exhibition facilities remain a major issue, although the relocation of the Aboriginal Cultural Heritage Trust exhibition to Kershaw Hall promises to revitalise that exhibition gallery.

Many of the major positions established following the Museum's staffing review were filled this year. Ms Elizabeth Willis, formerly a Curator, Special Projects was appointed Curator of History, while Ms Gaye Sculthorpe, an Assistant Curator at the Museum and more recently Curator, Gallery of Aboriginal Australia at the National Museum of Australia, was appointed Curator of Aboriginal Studies. Ms Gael Ramsay, previously employed to work on the Donald Thomson Collection, was appointed as the Curator of the Donald Thomson collection, while Ms Sandra Smith, employed at the Museum under the CEP training program during this year successfully applied for the position of Aboriginal Liaison Officer. In March, Mr Jim Berg, formerly Executive Officer of the Vic-

torian Aboriginal Legal Service, commenced a two-year internship with the Division as a trainee in Aboriginal cultural heritage and collection management. His work is directed toward the establishment of a successful training program in Aboriginal cultural heritage studies and management.

Important and extensive acquisitions were made by all curatorial departments. Considerable emphasis has been given to developing collections that reflect Victoria's unique history, while assistance has been extended to the Victorian Aboriginal Heritage Trust in their successful efforts to establish a collection of historical and contemporary Victorian Aboriginal artefacts. Progress in the computer-registration of collection records has increased markedly and in this aspect of the Division's work, as in so many others, we are indebted to the unstinted support of volunteers, without whom many of the projects underway would be impossible.

Three exhibitions were successfully initiated by Divisional staff, namely *Donald Thomson in Arnhem Land*, the *Victorian Aboriginal Cultural Heritage Trust* exhibition and *Cheer Up Children*, while staff also contributed towards others. Staff participated in the activities of the Friends of the Museum, lectured to special groups and cultural tourists, organised tours of the Museum by Aboriginal communities and organisations and contributed to the Museum's outreach program.

Department of Aboriginal Studies

For most of the year, work was hampered due to the Divisional restructuring. The first permanent curatorial appointments were made late in the financial year. The only exception was with the Donald Thomson collection as this Curator's position was externally funded and the incumbent was offered a permanent position in the Division's new structure.

Major research and curatorial projects during the year were thus based almost exclusively on the Donald Thomson collection. The microfiche catalogue of the Thomson collection was completed and an exhibition on *Continuity and Change in Arnhem Land* was mounted in Spencer Hall. Work continued on the compilation of a language glossary from Thomson's Arnhem Land and Cape York field notes and progress was made on cataloguing the Thomson's desert photographs and Solomon Island material. A major step forward in the curatorial area was the establishment of a computer data-base for all the Aboriginal collections in the Museum.

Major acquisitions during the year included fifteen items (mainly weapons and basketry) from south-eastern Australia donated by the Royal Historical Society of Victoria and thirteen wooden weapons (mainly from the Broome area c1920s) donated by S. Clerehan.

Aboriginal Heritage Unit (Kershaw Hall)

The Co-ordinator of the Aboriginal Unit, Mr John Atkinson was disappointed that the application to the Bicentennial Authority for funds to upgrade Kershaw Hall was not successful, however he was pleased at the way the Unit was able to face the reality as a team and direct their efforts towards the resources of the Museum in achieving other goals.

The Victorian Aboriginal Cultural Heritage Trust exhibition has added a new dimension to the work of the Unit, because Aboriginal people who now come to visit the Museum can see there are displays that are not only first class, but most importantly, are educational and enjoyable to visitors.

The Unit is nearly at full strength. The first Aboriginal Liaison Officer position has been filled by Ms Sandra Smith (formerly a CEP trainee) and the second position has been advertised, so that it will bring the Unit's number of full time staff to three, to

work with Aboriginal communities and undertake other important research work.

Collections Management

The E.W. Chinnery photographic collection, consisting of over 1800 images of Papua New Guinea during the 1930s, has been completely mounted, sorted and stored. Mrs Shiela Waters, Chinnery's daughter, is continuing with the documentation and photographs. The W.B. Spencer, J.H. Bulmer, A.W. Howitt, A.S. Kenyon and other miscellaneous papers have been indexed and micro-fiched, and have been sorted under up-graded conditions. The transliteration of the Spencer and Howitt papers, in particular Spencer's field notebooks, is progressing. Several Native People's artefacts from Eastern Canada have been researched and documented, revealing that at least one, a decorated trade cloth coat, is unique. Storage systems (types, required space, and environmental demands) have been developed for additional storage areas.

Members of the Department were involved in several major endeavours which include International Museums Day co-ordinated by Mark Chandler, and the exhibition on Victoria's Aboriginal Cultural Heritage curated by Catherine Thorpe.

Department of Oceanic Studies

Research was undertaken in association with Dr Richard Fullagar (La Trobe University) on a *Diprotodon* tooth dating to approximately 20 000 years ago, exhibiting what is thought to be humanly caused etchings. A manuscript draft has been produced, and the paper is to be submitted for publication. Research on the material culture and the ceremonial redistribution of wealth at Kinomere Village (Gulf Province, Papua New Guinea) continues, with the intention of producing a monograph on the subject.

In consultation with colleagues in other major cultural institutions around Australia, the ethnographic control list for areas outside Australia was drafted for implementation under the Movable Cultural Heritage Act. Two major Committee commitments were to the Friends of the Museum of Victoria, and to the Heritage Committee, Law Institute of Victoria, which examines and makes recommendations on the legal aspects of heritage matters. The establishment of an electronic data-base for the Pacific collections has been a priority activity. This is being undertaken in conjunction with the production of catalogues to some of the more important Pacific collections.

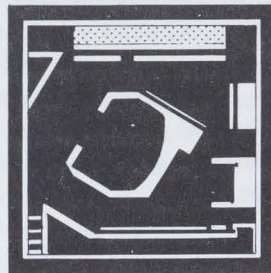

Major acquisitions for the year include ethnographic material from the south coast of Papua New Guinea from Irian Jaya, collected in the early part of the 20th century and donated to the Museum by Mrs D. Stokes. Ms J. Wilson donated a number of fibre baskets from the Ocean Island area, collected some fifteen years ago. Miss A. Secomb donated toys made at Kiriwina, Trobriand Islands, collected about thirty years ago.

Department of History

An initial staff position for the new History Department was created at the beginning of the year. Additional staffing assistance was obtained when Ms Sue Hodges was employed through the CEP Program, and the short-term employment of an additional Curator Ms Suzanne Hunt under salary savings. A display, *Cheer Up Children*, held in conjunction with Prince Henry's Hospital Historical Committee, was mounted in Thorpe Gallery from October-January. Research was carried out in conjunction with that Committee on the birth of the Hospital's Childrens Ward in 1910. Research began on the Friendly Societies movement in Victoria and on changes in domestic technology in Victorian households.

The development of a collection relating to Childhood in Australia has also commenced.

About 1200 items were received into the collection. A major new collection was received from the Office of Psychiatric Services at Parkville, which transferred the contents of the Charles Brothers Museum of Psychiatric History to us. This collection reflects changes in psychiatric care from c1880 to 1950 in Victoria. Significant donations of clothing and domestic effects were also received. A computerised accessioning system has been instituted, using the Museum's Titan facilities.

**PUBLIC
PROGRAMS
DIVISION**

The Public Programs Division plays a key role in presenting the Museum to the public, in mounting exhibitions and raising sponsorship, in disseminating information about the Museum's Collections and resources and in helping make those resources more accessible to the public.

The Division's responsibility for exhibitions includes design, construction and management. Photography, Preparators and Conservators Departments all work for exhibition and curatorial purposes. Community Services, Volunteer Personnel who assist all Divisions, the Teachers Service, Commercial Operations and Public Relations all play a part in creating the Museum's public face.

Museum Resource Service

The Museum Resource Service, under Dr Eric McClellan, provides services to Departments throughout the Museum and is responsible for the production of exhibitions and ancillary features such as special sound and light effects and audio-visual programs. Departments within the Resource Service include Photography, Preparators, Design, Construction Workshop, Technical Workshop and the Printing Workshop.

Exhibition Program

The exhibition program was expanded and attracted considerable attention to the Museum, offering the public a

range of displays during the year. As well as major exhibitions, mounted with the assistance of corporate and government sponsorship, a number of smaller exhibitions were mounted in association with outside organisations.

PEACE: AN EXHIBITION

Opened by Prof Max Charlesworth, Chairman, IYP, on Wednesday August 6, 1986, McCoy Hall.

This major exhibition was part of the Victorian Government's contribution to the program for the International Year of Peace. The exhibition highlighted the history of peace this century, ways of achieving peace in the future and ideas about what individuals can also do to foster peace. A Time Tunnel depicting events which have worked for or against peace and video productions which included segments by famous rock groups about peace were popular inclusions.

The exhibition was supported by the Department of Industry, Technology and Resources and the Ministry of Education.

CONTINUITY AND CHANGE IN EASTERN ARNHEM LAND

Opened by Mr R.D. Marginson, Vice Principal, University of Melbourne, Wednesday 10 September in Speneer Hall.

The exhibition displayed artefacts collected by Prof Donald Thomson in Arnhem Land earlier this century. The Thomson Collection is one of the most important collections of Australian Aboriginal material and it is viewed by the people of Arnhem Land as being a most valuable resource for future generations. David Gulpilil and the Ramininging Dance Group performed at the opening.

MERCEDES BENZ

A Reception was held in Bindon Hall on 11 September 1986 to preview a replica of the Benz 'Patent Motor Vehicle' of 1886. The vehicle, the 'Car of the Century', which launched

today's motor industry, was brought to Australia to highlight the automobile's Centenary Year celebrations. The exhibition ran for ten days and was sponsored by Lufthansa Airlines in association with Mercedes Benz (Australia).

ETRUSCAN ART EXHIBITION — SPOLETO FESTIVAL

Opened by Sir James Gobbo and the Hon Race Mathews, Minister for the Arts, Thorpe Gallery, September 12, 1986.

The exhibition was produced in celebration of Melbourne's inaugural Spoleto Festival. The Etruscans, the most powerful culture in Italy in the sixth century BC, have left the world a legacy of ancient artefacts of extraordinary beauty. The many fine Etruscan artefacts in the display complemented the Spoleto activities.

CHEER UP CHILDREN

Opened 23 October, 1986 by Professor Bernard Smith, in Thorpe Gallery. The exhibition of watercolours, from Prince Henry's Hospital, depicted a children's ward in the early 1900's. *Cheer Up Children* was mounted to coincide with Children's Week.

PHAR LAP EXHIBITION

Opened by Roy Higgins on Friday October 28, 1986, in Bindon Hall. On Monday October 20, Phar Lap was moved to the North Rotunda before a large media audience. This event was given significant coverage in radio, TV and newspapers. The exhibition featured historic photos, jockey's silks and training equipment used by Phar Lap's strapper and trainer. Sponsored by SIO.

IMAGES, ILLUSION AND REALITY. A History of Photography

Opened by the Governor of Victoria, Sir Davis McCaughey, on Tuesday November 18, 1986, in McCoy Hall. The exhibition, featuring rare and extremely valuable historic examples

of the art of photography, was brought to Australia by the Australian Academy of Science. *Images*, the most significant international photographic collection to be shown in this country, included some thirty rare and superbly crafted cameras. Part of the Museum's own rich photographic archive was displayed as well. Sponsored by the Sun News-Pictorial.

HEALTH FOR LIVING

Opened by Senator the Hon John Button, Federal Minister for Industry, Technology and Commerce, in November 1986.

The exhibition by medical researchers, showed what is being done in Victoria to overcome disease and health problems in our community. There were special displays on cancer, coronary heart disease and stroke and diabetes. Sponsored by Westpac Banking Corporation and the Australian Society for Medical Research.

THE OFFICIAL MUSEUMS DIRECTORY FOR VICTORIA

Launched by the Hon Race Mathews, Minister for the Arts, in Bindon Hall on Friday 19 December 1986. *The Museums Directory*, a joint publication of the Museums Association and the Victorian Ministry for the Arts, is sponsored by Telecom Australia. The Directory is a comprehensive guide to Victoria's museum network.

PHANTARAMA: The Origins of Moving Pictures

Opened by the Hon Race Mathews, Minister for the Arts, on Wednesday 25 February 1987. The exhibition, in Thorpe Hall, was produced in conjunction with the Australian Film Institute, and documents the discoveries and inventions that led to the development of moving pictures, the forerunner of today's 'movies'. A number of 'hands-on' experiments demonstrating the illusion of movement have proved extremely popular.

VICTORIAN ABORIGINAL CULTURAL HERITAGE TRUST

Opened by the Governor General, Sir Ninian Stephen, AK, GCMG, GCVO, KBE, on Monday March 2, 1987, in McCoy Hall. The exhibition was put on by members of the Victorian Aboriginal Cultural Heritage Trust. Approximately 900 guests attended the reception, including representatives from many Aboriginal communities within Victoria. The exhibition, in Spencer Hall, contained many examples of traditional and contemporary artefacts, historic photographs and dioramas. Boomerangs, shields, bags, baskets, decorative items, written memorabilia and documents all formed part of the display.

RED CROSS EXHIBITION

This exhibition, mounted by the Red Cross, looked at the Society's 70 years of history. The display contained photos documenting the Society's foundation in Victoria in 1914. Special features were a bandage winding machine and a 'torpedo' used to parachute blood plasma to field hospitals during World War 2. There was a Press Preview on March 12, 1987.

VIDEODISC — MUSEUM ON A PLATTER

This exhibition, which opened in March 1987, featured state-of-the-art compact disc and videodisc systems. The exhibition attracted considerable media and public support and was extended due to popular demand. 'Hands-on' demonstrations showed graphically how computer systems can be made to work in a museum environment. The BBC Domesday Project, a comprehensive catalogue of England in 1986, containing 50 000 pictures, 24 000 maps, 150 000 pages of text and 9000 statistical tables, all stored on 2 videodiscs was a highlight of the show.

ESSO'S RETURN OF THE DINOSAURS

Opened by the Premier, the Hon John Cain, on Thursday April 30, 1987 in McCoy Hall. The exhibition included casts of dinosaur skeletons from China, specimens from the Tyrrell Museum in Canada and, for the first time, fossil material from Victoria's Dinosaur Cove in the Otway Ranges. The recreation of Dinosaur Cove in a diorama, complete with sound effects, and an excellent video proved to be two of the most popular aspects.

Over 100 000 people had visited the show by the end of June, so the show was extended for a month. Sponsored by Esso Australia Ltd and Channel 10. Dinosaurs were flown by Qantas.

RMIT — 100 Years

The Hon Evan Walker opened this exhibition celebrating the RMIT's Centenary on Tuesday June 2, 1987. The display, in the North Rotunda, contained historic photos dating back to the Institute's days as the Working Men's College. Examples of machinery, woodwork, fashion and photography by students were displayed.

VISION VICTORIA

Vision Victoria, mounted by the Association for the Blind, was opened in the North Rotunda in August, 1986. The display highlighted the determination, spirit and achievements of blind people. An informative multi-screen audio-visual was part of the presentation.

DESIGN IN SWEDEN

The display, in Bindon Hall, was opened to the public on February 19, 1987. It drew attention to the quality and practical designs originating from Swedish enterprise. The display emphasised the design traditions in which nature is respected and artists and craftsmen design good everyday and utilitarian rather than luxury items.

MAP WEEK

Opened on October 20, 1986, this display, initiated by the National Mapping Council, was to raise interest in and awareness of maps and mapping. The exhibition was held in McCoy Hall.

Design Department

The Design Department has continued to maintain a high level of productivity, with increasing demands made on the Department to meet the exhibition schedule for the year. This was achieved and designs of a high standard produced.

In particular the Department played a major role in mounting *Peace — An Exhibition, Continuity & Change in Arnhem Land, Etruscan Art Exhibition, Cheer Up Children, Phar Lap, Images: Illusion & Reality, Phantarama, Victoria's Aboriginal Heritage, Museum on a Platter*, and *Esso's Return of the Dinosaurs*.

They also acted as advisors to the Red Cross and Association for the Blind in mounting their exhibitions in the North Rotunda.

Travelling exhibitions from the Museum included the *Hochberg Nature Printing* exhibition which travelled to the Queen Victoria Museum, Launceston and also the Tasmanian Museum and Art Gallery in Hobart.

As well, the Spencer Collection of Photographs was refurbished after being on tour to Hamilton Art Gallery. The exhibition then went on tour of the Regional Galleries in NSW.

The Department assisted in the production of promotional flyers, posters and brochures. Other projects throughout the year included work for the Planetarium, production of education kits and publications e.g. *Phantarama Activity Trails, Phantarama Education Kits and Friends Newsletter*.

Public Relations

As part of the Museum's endeavours to raise its public profile, a Public Relations Officer was appointed in March 1987. Her immediate tasks were working on sponsorship for *Esso's Return of the Dinosaurs*, arranging a television commercial with Clemenger Harvie Advertising, general promotion, editing and producing an exhibition catalogue and arranging an official launch by the Premier, the Hon John Cain, for *Esso's Return of the Dinosaurs*.

As well as arranging official receptions and publicity for exhibitions, systems were set up for regular distribution of information about the Museum to organisations such as Life Be In It, Victour, Melbourne Tourism Authority and Information Victoria Centre, and community service announcements on radio.

Contact was made with the Ministry for the Arts, Premier's Department, Melbourne City Council and similar organisations to ensure the Museum could benefit from their promotional activities and networks. Ms Barca also took on the production of the Annual Report.

Technical Workshop

The Technical Workshop provided a back-up for the Design Department in setting up lighting and sound for new exhibitions as well as general maintenance and restoration work for the Museum.

In particular they were involved in the *Etruscan Art* exhibition, *Cheer Up Children*, *Images*, *Association for the Blind* exhibition, *Phantarama*, *Esso's Return of the Dinosaurs*, *Museum on a Platter* and the *Swedish Design* exhibition.

The Department was responsible for general maintenance and renovation of Experilearn, the Planetarium, Children's Museum and the Story of Victoria audio-visuals.

Construction Workshop

The Construction Workshop played a major role in setting up and dismantling exhibitions as well as general construction and maintenance work for the entire Museum.

The Department was especially involved in the *Aboriginal Heritage* exhibition, *Cheer Up Children*, *Phar Lap*, *Images* and *Esso's Return of the Dinosaurs*.

Printing Workshop

The Printing Workshop, was responsible for general printing e.g. catalogue sheets, labels, forms, loan invoices, flyers, letterhead and salaries payroll forms (for the Ministry for the Arts). The newsletters *Guidepost* and *Newseum*, and invitations and complimentary passes for exhibitions *Images*, *Phantarama* and *Esso's Return of the Dinosaurs* were printed. Regular printing for the Planetarium and Community Services and assistance to the Education Service and Children's Museum were undertaken.

Photography Department

The Photography Department provided outstanding service in supplying photos and murals for exhibitions including *Peace*, *The Donald Thomson Collection*, *Phar Lap*, *Images*, *Victorian Aboriginal Cultural Heritage Trust* and *Esso's Return of the Dinosaurs*.

One hundred and forty photos were taken of the Museum and off-campus buildings and storage areas for the Museum Development Study Report.

A series of 60 colour transparencies was produced for the Museum of Victoria promotional booklet. An audio-visual for *Phantarama* and a video for *Essos' Return of the Dinosaurs* exhibition, which received wide praise for its excellent quality, were produced.

Since the former Science and Technology and Natural History Photography Departments amalgamated,

many new services have been introduced and new equipment introduced.

The Department has initiated the sale of photographic services to the public and other institutions. Demand has been such that a full-time assistant has been employed and part-time assistants are required at times to cope with the work load. Salaries are paid entirely from the income generated by the service.

The Photography Department assisted also in documenting material from the Collections and for curatorial research.

Between July and August 1986, Senior Photographer Frank Coffa gave a series of lectures and workshops to Applied Science Degree students at Rusden College. The Department also offered student training and job experience for photography students from RMIT and Preston College.

Preparators Department

This highly specialised Department contributed significantly towards exhibitions held as well as carrying out the important routine maintenance of dioramas and habitat settings.

A major task was the refurbishing and re-articulating of dinosaur replicas for the dinosaur exhibition. A large number of replicas were made for sale in the Museum Shop and 50 fossil replicas were mounted for presentation and public relations purposes. As well, the large Tsintaosaurus replica was sold to Japan and was packed and shipped.

A hands-on model of the Gippsland Earthworm, wasp and kangaroo models and models for Museum Guides and the Education Service were made. A second ant colony was prepared.

The Department handled the move of the Museum's most popular exhibit, Phar Lap, to coincide with an exhibition during the Spring Racing Carnival.

Considerable work was involved in

preparing bird mounts and experimental freeze-drying of vegetation for the *Birds & Gardens* exhibition.

Field trips to Korrumburra, King Parrot Creek, Tallarook State Forest and Dinosaur Cove proved successful for research and collection of specimens.

The Preparators also worked on a video on the taxidermy of the kangaroo and demonstrated preparation techniques for an educational television program.

As well, the Department was responsible for casting and mounting presentation plaques for the Museum of the Year Awards.

Specimens prepared

DEPARTMENT	ITEM	NUMBER
Mammalogy	Mounted specimens	8
	Skeletons	28
	Cabinet skins	26
	Freeze dried	4
Ornithology	Mounted specimens	2
	Skeletons	187
	Cabinet skins	61
	Freeze dried	14
Herpetology	Tortoise	6

Community Services

During the last year the co-ordination of voluntary work has changed from being an initial short-term project to a full-time staff responsibility, combining the former position of Co-ordinator of Guides with the Co-ordinator of Volunteers role.

A new project, Museum Outreach, aimed at taking the Museum Collections to people, has commenced. The Co-ordinator of Volunteers, the Outreach Co-ordinator and the Administrative Assistant of the Friends of the Museum now form the Community Services Department.

The Department's broad aim is to make the Museum's resources better known and accessible to a much

broader range of community members and visitors from near and far.

Volunteer staff have once again made an invaluable contribution to the majority of curatorial departments. Some of the people have been working for the Museum for a number of years; others have joined during the last year and are proving to be valuable assistants to departmental staff.

A team of long serving and new personnel have also worked in a range of ways with the public: guiding tours, offering information in major exhibitions and running activities related to those exhibitions.

Through the work of these people, Community Services has been able to:

- * offer 'special interest' tours, designed to meet specific needs, to both overseas and local groups
- * extend the public's learning and leisure opportunities with current exhibitions through interactive experiences, information and activities
- * publicise current exhibitions and events amongst a wide range of community groups
- * initiate a school holiday program to attract and service family and community groups

These initiatives are important in extending the Museum's audience and increasing attendance figures as well as ensuring a more fulfilling use of the Museum's resources.

Public response to these expanded and new services is highly positive and the initiatives will be developed further in the coming year. The team of trained volunteer personnel will need to be increased to support the work load.

The Community Services Department, and the Volunteers who make so much of the work possible, are providing an important interface between the Museum and the public at large.

The Museum is enormously indebted to all volunteer personnel for the special addition their time and

commitment gives to the overall resources, facilities and services of the Museum.

Outreach Program

The first outreach program from the Museum of Victoria was implemented in 1987.

The program increases the accessibility to the Museum's collections, by taking our artefacts and specimens to the less mobile sections of the community. These items are used to provide learning and leisure sessions on topics of relevance and interest to the participants.

A grant of \$8000 was received from the Lance Reichstein Foundation in late 1986 for employment of a part-time project development officer to plan and implement the program. Ms Penny Morison was appointed in February 1987.

The pilot phase of the program was conducted in the Western Metropolitan region from April to June 1987. Twenty-seven groups were visited during the 32 days in which the program was available. Five hundred people were involved in these groups which included play groups for pre-school children, adult literacy groups for mildly intellectually disabled people, rehabilitation and nursing home patients, migrant and isolated women, and severely disabled people. These are people who for social, physical, financial or geographical reasons find the Museum inaccessible. Their ages ranged from 18 months to over 80 years.

In the process of moving out into the community, the Co-ordinator has been greatly assisted by community service workers with the respective local governments and regional staff from the Western Regional Council for Social Development, Council of Adult Education, Community Services Victoria and the Living Museum of the West.

Internally, the project has received the back-up support essential from Museum staff within Public Programs

and curatorial and administrative staff from other divisions.

The response from people has been extremely enthusiastic and their excitement at the possibilities which open up through having animals, fossils, and Aboriginal artefacts available leaves little doubt that the opportunities the Museum is providing through the project will be quickly and continually utilised by the people for whom they are intended.

Education Service

Introduction

The teachers in the Museum's Education Service assisted approximately 200 000 school students who visited the Museum in booked school parties. The programs offered to help teachers use the Museum of Victoria and its collections as an effective and enjoyable resource.

Publicity

The Education Service advertised its services to schools through notices in the *Education Gazette* and flyers advertising special programs mailed through the Ministry for Education central mailing service to all schools. For the first time the Education Service produced an exciting poster ('Making the Most of the Museum') detailing the services and the special programs for Terms 1 and 2 1987. It was distributed to all schools and at in-services.

Special Programs

During 1986-87 an exciting range of activity based programs relating to special exhibitions and events was offered. These included:

Magic Lanterns (Feb-July), Shadow Puppets (Feb-July), Heritage Week (March-April), Making Tracks (Mar-Apr), Strings and Things (June), Digging up Dinosaurs (Feb-July).

Late afternoon and Saturday morning special programs were devised for senior students. These included:

Techniques for Collecting and Preserving Animals, Making Do . . . the 1930s Depression and European Settlement and Effects on Aboriginal Society.

A special joint program of visits to the Botanical Gardens, Museum of Victoria, National Gallery of Victoria and the Royal Melbourne Zoo called 'Museums of the Birds' was held in June.

As its contribution to the International Year of Peace the service presented a program of activities in the *Peace* exhibition area.

TV Education

A range of programs, on topics relating to the Museum, were presented by education officers on the Ministry of Education's weekly TV program. They included: Winter, Bicycles, Life in the Old Days, Endangered Animals, Dinosaurs, Gold, Old Time Entertainments, Nature Printing.

Inservice Training

The Education Service continued with its program of providing in-service training for teachers including a number on the general theme 'Using the Museum of Victoria as an effective educational resource'. A number of schools took advantage of an offer to staff to visit on school curriculum day.

In addition a number of evening in-service programs relating to short term exhibitions were held. These included:

Peace, *Phantarama* and *Esso's Return of the Dinosaurs*.

Education staff presented workshops at a variety of in-services held by other organisations for teachers.

The Education Service produced a wide range of kits which complemented exhibitions. They included activities for school or home use, information for teachers, exhibition trails and resources lists.

A variety of trail sheets relating to various short and long term exhibitions were also produced.

Commercial Operations

The most important role of the Commercial Operations Section is to create revenue for the Museum of Victoria, through its retail outlets:—

- The Museum Bookshop, specialising in quality books and souvenirs.
- The Exhibition/Children's Shop Speciality Items relating to the temporary exhibitions taking place in the Museum.
- The Museum Coffee Shop/Take-away and catering.
- Other important roles include: the initiation of design and production of specific and exclusive lines of merchandise relating to the Museum's activities.

Activities

In the past year, Commercial Operations has also become involved in other revenue generating activities:

- The wholesaling of merchandise/publications to other national and international Museums
- The development of Photographic Services on a commercial basis
- Development of replicas and products unique to Australian museums
- Managing exhibition ticketing and merchandising for all major paying exhibitions: *Peace: An Exhibition*, *Images*, *Esso's Return of the Dinosaurs*
- Co-ordination of major functions i.e. Mobil Business and the Arts Awards.

Conservation Department

Conservation

The Conservation Department assisted the Design Department with a number of exhibitions including *The Hochberg Collection*, *Cheer up Children*, *Etruscan Art*, *Donald Thomson Collection*, *Victorian Aboriginal Trust*, *Prohibited Imports*, *Phar Lap*, *Images*, *Phantarama*.

The Conservation Department assisted with the packing and unpacking objects for exhibitions, formulated all parameters for the relative humidity, temperature and illumination and advised design and curatorial staff of objects' safety.

Three hundred and eighty two objects were cleaned and some major or minor conservation treatment undertaken before objects were displayed.

A review of past pest control procedures was undertaken and a system was established which covers all Museum premises including Abbotsford and Port Melbourne storage areas.

A project involving extensive environmental monitoring of exhibition areas was undertaken.

A safety code for laboratory procedures was formulated and written by the Senior Conservator for general use throughout the Museum.

Assessment and calculations of conservation requirements for the ethnographic collection was carried out. A classification system of the state of preservation of objects was developed for calculation of time required for conservation.

A program for a three year conservation project involving research and treatment of two of the Museum's largest ethnographic collections, Australian Aboriginal and Oceanic was formulated.

The Conservation Department is investigating the use of computers to monitor and record the internal environment of the Museum and to store all conservation data.

Professional assistance was given to a number of museums and institutions.

Research

An extensive literature search was carried out regarding examination and analysis of Egyptian mummies.

The dating of Egyptian mummy Tjebj was carried out by C14 Dating Laboratory, Australian National University and in New Zealand.

Numerous analyses of pigments, wood and textile components of the coffin and the mummy were carried out.

Children's Museum

The Children's Museum was established in 1985 as a project of the Museum of Victoria to mark Victoria's 150th Anniversary.

On 29 September 1986, the Children's Museum's first birthday, the Minister for the Arts, the Hon Race Mathews, announced that permanent funds for salaries totalling \$114,000 had been allocated. Planning for a permanent future is continuing with the very important advice and support of the Children's Museum Board.

The Children's Museum brief is:

- To relate the rich collections and resources of the Museum of Victoria to children and their families in ways which emphasise participation, access, interaction.
- To research and develop new roles for the Museum, especially in the area of public programs.
- To make innovations in exhibition design, presentation and methodology.
- To satisfy the visitor's curiosity about the processes of the Museum.

During the past financial year 309 941 visitors have passed through the doors averaging 874 per day. The highest attendance was recorded on the Queen's Birthday with 5 145

visitors. On June 2 Mrs Jean McCaughey welcomed the 500,000th person to visit since the official opening 21 months before.

The whole operation depends heavily on a corps of specially trained and recruited volunteer staff. They are extremely important in relating the exhibition to visitors and to the community at large.

The *Everybody* exhibition which explores the human body and health related issues through multi-disciplinary presentations has extended its stay at the Children's Museum due to popular demand. A Taskforce funded by the Health Department, is currently working on the proposal to travel *Everybody* to country and regional Victoria.

Plans are well under way for two new thematic exhibitions:

- Game Play — exploring children's traditional culture
- Colour — to present the science, technology, culture and aesthetics of colour

Mary and Grant Featherston, who designed *Everybody* continue to work with the Children's Museum on these exhibitions.

In May 1987 the Discovery Room was doubled in size to provide a larger, more stimulating learning environment and a greater range of Museum specimens, objects and materials.

Thematic exhibitions are supported and extended by multi-disciplinary programs which also serve to link with a variety of community concerns beyond the Museum.

Programs

- Everybody and Beyond

— Term 2 holidays 1986.

Over 4000 Museum visitors participated in activities on the body and body image, assisted by volunteer staff and work experience students from the Institute of Early Childhood Development. St. John's Ambulance Association provided staff and assistance for a number of these activities.

- Peace Drawing Us Together

Children from all over Victoria painted images of their everyday life to exchange with children from the Hangzhou Children's Centre, China. This was part of the Museum of Victoria's *Peace* Exhibition.

- What If I Couldn't Hear Workshop

— Deafness Awareness Week
A special display and related activities sensitised over 1000 young visitors to hearing disabilities. This program was run in conjunction with the Deafness Foundation and the Victorian School for Deaf Children.

- 'Fly Through the Food Tube'

September – November
Ten drama students from Swinburne Community School, inspired by the food tube exhibit, presented weekly performances of their self-developed play to over 250 visitors.

- 'A Celebration of Butterflies'

— January.
This 4 week program was a celebration of the butterfly. It was run in conjunction with the Royal Melbourne Zoo and FEIPP, Melbourne City Council. Butterfly displays emphasising the Victorian collection were provided by the Department of Entomology, Museum of Victoria, and Australia Post provided a butterfly stamp display featuring the renowned Charles McCubbin series.

Over 10 000 children and their families examined butterfly wings under microscopes (revealing a rich colourful tapestry appearance), then made butterfly kites. Celebrations culminated in a 'Grand Butterfly Kite Fly' at Royal Park, with the assistance of the Kite Association of Victoria.

- First Aid for Everybody

— March–June.
A series of five practical/demonstration sessions on a winter first aid theme were presented by St. John Ambulance Association members on Sunday afternoons, which is the peak visitation time for the Children's Museum.

- Hands on Hearts—Easter

To observe Heart Week, a program of

activities and a special display was developed in association with the National Heart Foundation, and in consultation with children and their families.

Human and domestic animal hearts were borrowed from Melbourne University. Additional support material was provided by the Baker Institute and the Royal Melbourne Hospital and Medtronics.

- Saturday Morning Discoveries

— April–June

A series of Saturday morning workshops for children and their families was piloted. Topics such as 'Microscopes and Magnification' were explored. Due to their success further workshops have been programed for 1987–88.

- Children's Museum Young Museologist Course — May–June.

To extend the Museum's work to young people, a 5 week introductory course on the whys, wheres and hows of museums was developed and trialed over consecutive Saturdays. It is scheduled to recommence July 1987, and then again in September.

- Living Lungs — Term 2

holidays 1987

Six student teachers from Victoria College specialising in Health Studies, joined forces with our volunteers to present a range of activities highlighting the human cardio-respiratory system.

Outreach Program

- Everybody Travelling

The Health Department has provided \$35,000 for a team to research travelling the *Everybody* exhibition. Their proposal will include recommendations for improved content, for the design and construction and travelling of the exhibition, and models for community involvement in each locale.

Sources of Support

The community at large has been very generous in its support of the

Children's Museum. We especially wish to acknowledge:
 Department of Sport and Recreation
 Institute for Early Childhood Development
 Ministry for Health
 Myer Foundation
 St. John Ambulance Association

MANAGEMENT SERVICES DIVISION

Introduction

The Management Services Division provides support services in the areas of accounting, staffing, stores, transport, library, building security and maintenance.

The Division was able to consolidate its administrative services, despite difficulties encountered with the re-organisation of the Museum.

Finance

Staffing continued to be a problem during the year with difficulty being experienced in recruiting qualified staff. The Section was, however, strengthened by the appointment of a Financial Controller responsible for management reporting. Although during the year the workload continued to increase considerably, concentrated efforts were made to catch up on the back-log in terms of the Annual Accounts. At the same time steps were taken to improve the procedures for internal control, financial reporting and the development of Exhibition budgets. Major initiatives were also taken to improve the cash handling procedures and increase the Council's interest earnings by opening a new bank account. At the end of the financial year further efforts were being made to recruit suitably qualified staff; investigations were underway to establish the viability of using the Ministry

for the Arts computer for processing Council accounts and action was being taken to establish suitable leasing arrangements for the Museum Coffee Shop.

Personnel and Office Services

This Section continued the process of consolidating the Personnel and Position documentation of the three former institutions and by early 1987 the new filing system was operating effectively. The stabilising of the staff complement enabled the Section to provide a complete and efficient Personnel function while continuing to review and improve internal work systems, Museum-wide services and procedures. As the year progressed the Section began to gradually take over more responsibility for functions previously carried out by the Ministry for the Arts. The Ministry has formalised this process by the development of a Devolution of Delegations package which will be implemented in the Museum (as a pilot program for the other Ministry Branches) early in the next financial year. The package delegates authority to the Museum to approve decisions concerning position classifications, recruitment and many other Personnel Services functions. It is anticipated that this initiative will further enhance the efficiency of the Museum's operations.

Stores and Transport

The Section provides stores to the Museum, co-ordinates and maintains the vehicle fleet, handles the movement of goods and closely liaises with officers of the State Tender Board, Victorian Government Motor Vehicle Committee and other relevant agencies. During the year the Section experienced some staffing problems with the Officer-In-Charge being promoted to another Department and the Storekeeper being in attendance only intermittently due to illness. Despite this situation, the Section continued with its development of

procedures for ordering and control of stores, exhibition expenditure, monitoring and transport functions.

The Section has also relocated and re-organised its stores facilities.

Buildings and Property

In association with the Public Works Department and the Central office of the Ministry for the Arts, the newly established Buildings and Property Section was successful for the second successive year in expending the Museum/State Library Works and Services allocation. The details relating to the 1986-87 expenditure of \$1.585M are outlined in the Report of the Building Management Committee.

A very significant improvement was also effected this year in the arrangement of responsibility for urgent and essential minor works being vested with the Museum. This initiative clearly enabled works and services to be undertaken more expeditiously and efficiently at the local level.

Safety/Security and Cleaning Services

This Section maintains the appearance of galleries and outside areas, assists members of the public to enjoy their visit to the Museum and provides security for the public, the Collections and the building.

The employment rate of females to males had not altered significantly during the year however, the job description was changed to highlight the equal employment opportunity factor in an endeavour to encourage more applications from women.

The 1986-87 financial year saw the continuation of the general 'open-door' policy adopted by Museum Management in 1985-86 with regard to its communication with Safety/Security Officers. In addition, Management has encouraged its Safety/Security Officers to be actively

involved in the designing of exhibitions with security in mind, and to participate in altering work practices.

Attempts have also been made to alleviate boredom and enhance job fulfillment of Safety/Security Officers such as through the introduction of 'roving patrols'.

Library Services

The various collections held in the Museum Library are of national importance and in many instances are unique in Australia. The aims are to conserve, organise and acquire new materials and to provide information to support the work of the Museum's staff.

The amalgamation of the former separate Library collections in Natural History and Science and Technology has now been completed. This necessitated the physical relocation of the Science and Technology Library and also a rationalisation and reconciliation of disparate systems and procedures.

The Library acquired 300 Volumes in 1986-87 and also a very important and much needed collection, the Royal Society of Tasmania Reports 1849-50; 1853; 1855-58.

1331 current periodical titles were also received:

307 Subscriptions

345 Donations

679 Exchanges for the *Memoirs* and occasional papers of the Museum.

A subscription was taken for Dialog, as on line data base, which will greatly facilitate the provision of information to the Museum Library's clientele.

Report of the Building Management Committee

General Comments

The Building Management Committee is established in accordance with the provisions of the Museums Act 1983 and has responsibility for the entire Museum/State Library Works Program.

The members of the Committee for 1986-87 were:

CHAIRMAN: Professor J.W. Warren,
President,
Council of the Museum of
Victoria.

Mr P.S. Parkin,
Council of the Museum of
Victoria.

Mr B. Johns, nominee of the
President,
State Library Council.

Cr P.B. Dahan, State Library
Council.

The Committee met on four occasions during the year and the matters of particular concern which were addressed included establishment of the 1986-87 Works Program; the progress of works related to occupational health and safety; the City of Melbourne and the Metropolitan Fire Brigade Notice on Fire Protection and Prevention for the Museum/State Library Complex; the provision of adequate external storage requirements for the Museum and State Library; and monitoring progress of the Works Program and expenditure of the Program Allocation.

The Committee is again pleased to report that the program of works determined for the year was completed and the Program Allocation fully expended. The appreciation of the Committee was extended to staff from the Public Works Department, the Ministry for the Arts and the Museum's Building & Property Section for their successful management of the program.

The Public Works Department has advised that restoration work on

the Swanston Street facade stonework, parts of which have broken away and fallen to the forecourt and portico, is to commence early next financial year. The work is to be completed in two stages: Stage 1 is a water mist cleaning process which is scheduled to commence early in August, 1987 while Stage 2 is the stone repair/replacement phase which is scheduled to commence before Christmas 1987. New protective canopies were erected during the year to provide protection from those sections of the facade which are breaking away and falling.

It is also pleasing to report that work has commenced on a major refurbishment of the Museum's Preparation Workshops. The working conditions in this area are poor and well below that which is necessary for this very specialised service department.

The first Notice served on the Museum/State Library Building Complex in late July, 1986 by the City of Melbourne under Sub-Section 136(1) of the Building Control Act 1981, concerning Fire Prevention and Protection, has been the subject of extensive discussions between officers of the Metropolitan Fire Brigade, City of Melbourne, Public Works Department, Ministry for the Arts and the Museum/State Library. All matters of concern in the Notice have now been resolved and a second and final Notice is expected to be served early next financial year. Officers of the Public Works Department are assessing the extent of issues raised in the Notice so that a program of works together with estimated costs will be produced for inclusion in the proposed 1987-88 Works Program for Budget consideration. Considerable progress has already been made on works cited in the Notice and these include emergency exits, emergency lighting and directional signs, automatic fire and smoke detection systems and an external emergency exit stairway serving a number of the

upper floors on the south east corner of the building.

Occupational Health and Safety Committees for the Museum and State Library were established during the year in accordance with the Occupational Health and Safety Act 1985. The main issues identified for investigation and attention by these Committees have been Emergency Procedures and Safety Requirements within the Complex. A number of recent changes to the building structure and to staff accommodation areas have made the existing emergency procedures outdated and arrangements are currently underway to re-write and re-issue these instructions. Practice evacuation drills will be conducted on a regular basis when the new procedures are available. A training program of lectures, film and instruction sessions on the philosophy of fire procedures and the use and application of available fire fighting equipment has also been introduced and will be attended by all staff in the complex. Safety practices and some hazards have also been investigated and it is anticipated that the necessary arrangements will be in place soon to correct these situations.

The lack of adequate storage space for both the Museum and State Library is now seriously affecting the ability of both institutions to carry out their statutory responsibilities to maintain and develop the State Cultural Collections. A statement detailing the consolidated storage requirements for both institutions has been prepared and forwarded to the Ministry for the Arts for the consideration of the Minister and inclusion in the Budget Estimates for 1987-88.

A significant improvement was effected this year in the arrangement of urgent and essential minor works. Following representation from the Museum/State Library and the Ministry for the Arts, the Department of Management and Budget agreed to a proposal that responsibility for management of these particular works, together with the appropriate

allocation of funds, be assigned to the Ministry. With control of the works therefore vested with the Deputy Director (Management Services) and the Museum's Building and Property Section, arrangements were handled more expeditiously and efficiently at the local level.

Works Program

The total allocation for Works and Services for the Museum/State Library Complex for 1986-87 was \$1,585,000 and the allocation was fully expended.

Major Works

The following is a brief summary of the works completed or commenced during the financial year:—

Electrical Works: Allocation \$165,000 — Expenditure \$164,182. The major electrical works undertaken during the year involved the replacement of the main electrical switchboard and completion of the re-wiring of the Library Dome building.

La Trobe Library – North West Wing Air-Conditioning: Allocation \$130,000 — Expenditure \$129,017. Work on Stage 1 of the installation of the air-conditioning system was satisfactorily completed during the year. However, some problems have been encountered in attaining optimum operating conditions.

Storage Cabinets and

Shelving: Allocation \$124,000 — Expenditure \$123,317. A considerable proportion of this allocation was required to meet a carry forward commitment from the previous year with the result that only a limited amount of the critical storage equipment requirements for the Museum and State Library for the year could be obtained.

Thermal Alarms: Allocation \$83,000 — Expenditure \$82,792. Further works on extension of the automatic thermal and smoke detection system throughout the complex were undertaken during the year.

Roof Repairs: Allocation \$1,500 — Expenditure \$1,373. Extensive roof repairs have been carried out on the building complex during recent years and basic maintenance works only were scheduled for this year.

Safety and Security Works: Allocation \$128,000 — Expenditure \$127,737. The main thrust of works completed under this allocation was related to health and safety and considerable progress was achieved in this area. The scope of works included installation of protective canopies at the Swanston Street facade to catch falling pieces of the crumbling stonework, installation of a number of laboratory fume extraction systems and installation of ventilation systems in the State Library's North West Wing and photographic laboratory. A considerable number of items of equipment to assist with safety precautions were also acquired and they included fire blankets, inflammable liquid cabinets, oxygen resuscitation kits and other first aid training equipment.

Security works undertaken included completion of the installation of wrought iron window grills, security roller grills and an electronic intruder alarm system to a collection storage area. Work on re-cladding the exterior framework of the goods lift damaged during the Russell Street bomb blast was also completed.

Redevelopment Works: Allocation \$105,600 — Expenditure \$105,558. Work on refurbishment within the Dome Building, establishment of a new office for the Museum Director and replacement of worn and dangerous carpet in the Technical Services Division of the State Library were the main projects completed under this

allocation. However work also commenced on a major refurbishment of the Museum's Preparation Workshops. This area currently provides antiquated and extremely poor working conditions for one of the most specialised service areas in the Museum.

Dover Building: Allocation \$25,000 — Expenditure \$24,312. Works on Stage 1 of the Building Renovation program were completed during the year. They involved completion of the removal of partitions and other asbestos based materials.

Repair and Restoration Works: Allocation \$5,000 — Expenditure \$4,607. The remaining clean up and repair/replacement works on the Russell Street frontage windows caused by the Russell Street bomb blast were completed during the year.

Modifications for Fire Safety: Allocation — \$496,000 — Expenditure \$496,000. Following receipt of the Notice from the City of Melbourne regarding Fire Prevention and Protective works required in the Museum/State Library Building, the Department of Management and Budget provided an initial allocation to enable work to commence on the more critical areas of concern cited in the Notice. It is anticipated that additional funds will be provided over a period of years to allow the total program of works to be completed. The works undertaken this year included completion of the external emergency exit stairway on the south-east corner of the building, further extension of the automatic thermal and smoke detector system and commencement of the replacement of fire alarm indicator panels, completion of Stage 1 and commencement of Stage 2 of the installation of new fire exit doors, further extension of the installation of new exit lights and emergency lighting. A considerable number of portable fire

extinguishers were also acquired to replace existing extinguishers made obsolete by recent changes in Australian Standards.

Minor Works

Programed Minor Works: Allocation \$81,900 — Expenditure \$80,797. A number of projects related mainly to health and refurbishment were completed under this allocation. They included completion of Stage 1 of the replacement of the corroded water reticulation system at the Abbotsford Annexe, overhaul of a compactus storage system in the La Trobe Library, fitting of new carpet and painting on the third floor of the La Trobe Library, and construction of new office accommodation in the State Librarian's Administrative area.

Work also commenced on the installation of a new ventilation system and a new partitioning arrangement to assist ventilation in the Museum's Survey and Ornithology Sections at the Abbotsford Annexe.

A range of office furniture and equipment was also acquired under this allocation together with the arrangement of a number of telephone installations and alterations to accommodate new and relocated staff throughout the Complex.

Urgent and Essential Minor Works: Allocation \$190,000 — Expenditure \$190,000. Extensive minor electrical, plumbing, carpentry, mechanical and other building maintenance works were arranged to ensure that the building complex was maintained at a safe and operative level.

APPENDIX 4.

AUDITOR GENERAL'S REPORT AND FINANCIAL STATEMENTS FOR THE COUNCIL OF THE MUSEUM 1986/1987

AUDITOR-GENERAL'S REPORT

The accompanying financial statements comprising a balance sheet, statement of income and expenditure and statement of sources and applications of funds of the Council of the Museum of Victoria for the year ended 30th June 1987, prepared in a format approved by the Treasurer, have been audited as required by the Museums Act 1983 and in accordance with Australian Auditing Standards.

The Council has neither quantified nor valued the land, buildings and other real and personal fixed assets vested in the Council. Since the Council accepts substantially all the risks and benefits incidental to ownership of these assets, it is my opinion that all assets vested in the Council should have been valued and recorded as assets in the financial statements.

During 1986/87 the Council processed various journal entries to adjust income and expenditure items within the statement of income and expenditure. The Council was unable to provide supporting documentation to enable audit to verify their validity.

In my opinion, due to the significance of the matters referred to above, the financial statements do not present fairly the financial position of the Council of the Museum of Victoria as at 30 June 1987 or the results of its operations for the year ended on that date in accordance with Australian Accounting Standards.

MELBOURNE R. G. HUMPHREY
17/6/1988 *Auditor-General*

COUNCIL OF THE MUSEUM OF VICTORIA

In our opinion, the accompanying financial statements comprising a balance sheet, statement of income and expenditure and statement of sources and applications of funds are in accordance with the requirements of Section 30 of the Museums Act 1983 and present fairly the financial transactions during the 1986/87 financial year and the financial position as at 30 June 1987 of the Museum of Victoria.

At the date of this certificate, the Council is not aware of any circumstances which would render any particulars included in the statements to be misleading or inaccurate.

Peter Parkin

Ian Sinclair

CHAIRMAN (Acting)

25/5/1988

TREASURER

20/5/1988

COUNCIL OF THE MUSEUM OF VICTORIA

STATEMENT OF INCOME AND EXPENDITURE FOR THE YEAR ENDED 30 JUNE, 1987

COUNCIL OF THE MUSEUM OF VICTORIA NOTES TO AND FORMING PART OF THE ACCOUNTS FOR THE YEAR ENDED 30 JUNE, 1987

1. ACCOUNTING POLICIES

- These accounts have been prepared under the historical cost convention and have not been adjusted to take account of the current cost of specific assets or their impact on the operating results. The accounts for income and expenditure are on an accrual and going concern basis.
- Until 30 June, 1984 funds used for the purchases of non-current assets were recorded as expenditure in the year's accounts. The only assets shown in the Balance Sheet were those which were in the form of, or which would or could be converted into, cash or its equivalent, viz investments, debtors, stocks on hand, and those used in the Museum Shop operations. As from 1 July, 1984, assets purchased by the Council have been capitalised in the Balance Sheet.
- Depreciation is charged on non-current assets (except Collections) at rates assessed to match the cost of these assets against their estimated economical lives. Depreciation is calculated on the straight line method.
- Stocks have been valued at the lower of cost or net realisable value.
- Grants from Government and other sources are brought to account as income as received. Expenditure from such Grants are included as expenses when incurred. (See Note 9).

2. INVESTMENTS

Investments are held for the purpose of gaining income and are not normally sold before maturity.

They are held in the accounts at cost.

Investments on hand as at 30 June 1987 were:

	1986/87	1985/86
	\$	\$
Commonwealth Government Securities	206,700	206,700
Semi Government Securities	240,800	240,800
Negotiable Certificates of Deposit, interest bearing deposits and other Money Market Securities	318,127	678,454
Other Securities	17,000	17,000
	<u>781,827</u>	<u>1,142,954</u>

3. SERVICES PROVIDED BY THE MINISTRY FOR THE ARTS

In addition to the expenditure incurred by the Council of the Museum of Victoria an amount of \$10,470,742 (1985/86 \$7,366,958) was expended from Funds appropriated to the Ministry for the Arts. Major components of this expenditure included:

	1986/87	1985/86
	\$	\$
Salaries and related costs	5,020,049	4,648,948
Operating expenses	1,000,667	888,418
Other Recurrent Expenses	44,940	—
Works and Services*	4,405,086	1,829,592
	<u>10,470,742</u>	<u>7,366,958</u>

*The Works and Services component includes a sum of \$2,670,631 expended on the Museum Redevelopment Study.

4. DONATIONS

	1986/87	1985/86
	\$	\$
Amounts of \$5,000 and Over		
R.E. Ross Trust	5,000	
Royal Automobile Club of Victoria	15,000	
Victorian Automobile Chamber of Commerce	15,000	
	<u>35,000</u>	<u>216,500</u>
Various smaller donations and collections from Donation Boxes	14,856	30,709
	<u>49,856</u>	<u>247,209</u>

5. INTEREST

	1986/87	1985/86
	\$	\$
Commonwealth Government Securities	26,420	26,483
Semi Government Securities	23,325	24,332
Negotiable Certificates of Deposit, Interest Bearing Deposits and other Money Market Securities	81,050	113,765
Other Securities	2,253	5,289
	<u>133,048</u>	<u>169,869</u>

6. (a) MUSEUM SHOP OPERATIONS

The Museum Shop consists of two major functions —

- (1) A Coffee and Take-Away food outlet located near the Swanston Street entrance.
- (2) Two Book and Souvenir outlets located near the Swanston and Russell Street entrances.

The following statement includes all shop operations —

(b) MUSEUM SHOP — STATEMENT OF INCOME AND EXPENDITURE

	1986/87		1985/86
	\$	\$	\$

Miscellaneous	2,232		2,345
TOTAL EXPENDITURE		371,298	308,325
NET PROFIT (LOSS) ON OPERATIONS		24,907	35,082

(c) MUSEUM SHOP — EVENTS AFTER BALANCE DATE

As at balance date, the Council of the Museum of Victoria had decided to lease the food operations to a suitable caterer. Tendering procedures were in progress.

7. NON CURRENT ASSETS

	1986/87		1985/86
	\$	\$	\$
Motor Vehicles			
Motor Vehicle	25,377		25,377
LESS accumulated depreciation	5,213		138
		20,164	25,239
Shop Assets			
Improvements	68,079		68,079
LESS accumulated depreciation	15,693	52,386	12,289
Plant and Equipment	61,655		44,949
LESS accumulated depreciation	27,415	34,240	17,815
Motor Vehicle	8,391		8,391
LESS accumulated depreciation	1,871	6,520	193

Furniture and Fittings	78,613		78,613
LESS accumulated depreciation	27,670	50,943	19,808
		<u>144,089</u>	<u>149,927</u>

Furniture and Equipment

Equipment	96,759		88,733
LESS accumulated depreciation	36,718	60,041	22,163
EDP Equipment	59,231		38,142
LESS accumulated depreciation	20,623	38,608	7,457
Furniture and Fittings	3,391		3,391
LESS accumulated depreciation	1,143	2,248	465
		<u>100,897</u>	<u>100,181</u>

8. The Collections included in the balance sheet \$250,507 (1985/86 \$141,441) consist of only a very small part of the actual collection of the Museum.

The Collections of the Museum have been acquired over a long period by many means (including discovery, donation, manufacture, purchase) and no monetary value has ever been assigned to them. The Collections included in the balance sheet consist of **only** those purchased by the Council from Council Funds (i.e. not including State Budget Funds) and only of these since 1 July 1984.

The Collections which are included are valued at cost.

9 ACCUMULATED FUNDS

	1986/87	1985/86
	\$	\$
Trust Funds	552,064	538,247
Externally Funded Special Projects	526,209	475,604
General Funds	730,264	639,994
	<u>1,808,537</u>	<u>1,653,845</u>

"Trust Funds" consist of those funds which may be used by the Council of the Museum for Museum purposes as defined by the relevant Trust deed or will.

"Externally Funded Special Projects" consist of unexpended Government and Other Grants tied to a specific purpose.

"General Funds" consist of all Council Funds not included in the other two categories.

10 EXTRAORDINARY ITEMS

	1986/7	1985/86
	\$	\$
Capital Gain on Sale of Shares	—	34,272
	<u>—</u>	<u>34,272</u>

11 DEBTORS

	1986/87	1985/86
	\$	\$
Debtors	24,104	35,799
LESS: Provision for Doubtful Debts	3,867	—
	<u>20,237</u>	<u>35,799</u>

12 FUNDS FROM OPERATIONS

Reconciliation of funds from operations with ordinary surplus is as follows:—

	1986/87	1985/86
	\$	\$
Funds from operations	214,578	152,849
LESS: Depreciation	56,019	27,615
Doubtful Debts	3,867	—
